                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Only the first 147416 bases of this clone are being submitted. Bases 145417-155040 overlap accession number AC004147 (WIGGR project 1228). The first 2Kb of the overlapping region are submitted to confirm overlap.

The sequence in this assembly is a combination of BAC based reads and whole genome shorgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.fmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Worley, K.C. COMMENT

```
* NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 1 contigs. Gaps between the contigs.

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            64

NOTE: This is a 'working draft' sequence. It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a 'working draft' sequence. It currently
* consists of 48 contigs. The true order of the places
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence

Submitted (108-OCT-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Sep 14, 2002 this sequence version replaced gi:21737094.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold', Mithin each contig-scaffold', Mithin each contig-scaffold', Mithin each contig-scaffold', Mithin each contig-scaffold', Mithin each contig-scaffold's and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   * NOTE: Estimated insert size may differ from sequence length

* NOTE: This sequence may represent more than one clone.

* NOTE: This is a 'working draft' sequence. It currently

* consists of 1 contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* This sequence will be preserved.

* The finished sequence as soon as it is available and

* the accession number will be preserved.

Submitted (15-NOV-2002) Human Genome Sequencing Center, Department Submitted (15-NOV-2002) Human Genetics, Baylor College of Medicine, One of Molecular and Human Genetics, Baylor College of Medicine, One Daylor Plaza, Houston, TX 77030, USA

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas and whole genome shotgun sequencing reads assembled using described in the facture table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                   2. (bases 1 to 239429)

Novel nucleic acid molecule encoding monocyte-chemoattractant-protein-1, useful in gene therapy, for treating atherosclerosis and cancer.

Disclosure; SEQ ID NO 1; 30pp; English.

The invention relates to a novel nucleic acid molecule (I) comprising a sequence encoding monocyte-chemoattractant-protein-1 (MCP-1) or a protein having the biological activity of MCP-1. A protein encoded by a nucleic acid of the invention has cytostatic, and antiatreriosoclarotic activity. A nucleic acid of the invention may have a use in gene therapy. A compound of the invention is useful in the preparation of a medicament for the treatment of atherosclerosis or cancer e.g. cervical carcinoma. A

                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to a novel methods and animal models for testing candidate drugs that can be used for the treatment or prevention of agerelated macular degeneration (AMD). Specifically, it refers to addinistering a candidate drug to gene knockout mice, in particular Ccl2-deficient, Ccr2-deficient and/ or a Ccl2-deficient/Ccr2-deficient dual knockout mouse. The present invention describes analysing the knockout mouse eye for development or regression of drusen and/ or inpofuscin mouse eye for development or regression of drusen and/ or lipofuscin membrane, retinal degeneration and/ or choroidal neovascularisation. Accordingly, such compositions exhibit ophthalmological activities and can be used for gene therapy purposes. This polynucleotide sequence is the human Ccl2 gene and enchancer region DNA of the invention.
                                                                                                                                                                                                                                                        Testing candidate drug for treating age-related macular degeneration, by administering drug to Cc12-deficient, Ccr2-deficient Knockout mouse, and analyzing development or regression of drusen and/or lipofuscin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GTCCAAGCAAGAGATGATGAAGGCCTAAATATGGAGCCAAAGAGGCAGCAATGAAGAATG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for secreening drug candidates; (ii) for secreening of bioactive agent capable of biding to Carcinoma secreening (AP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for carcinoma; (vi) for inhibiting the activity of CAP; (ix) for the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent.

Identifying at least one gene involved in plant resistance or response pathogenic infection for conferring resistance or tolerance to a plant bacterial, fungal or viral infection by determining or detecting plant

```
ö
                                                                    The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is bacterial, fungal or viral infection. The present sequence to a plant to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61 TAGAAATGGTGATGATGTGTACATCAAGCAGGGAGAAAACCAATGAACCAGATGCGAATT 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            866 MAKWYWATGWATWMWRYTWYTYCYAMTCAKCKYKMAMTKWWTTWACAWRATSWRWRAM 807

une present invention integrate to move, where the series are useful for: (i) for screening drug darking darkes; (ii) for screening of bloactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bloactive agent capable of modulating the activity of CAP; (iv) for diagnosing evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating; carcinoma; (vii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma as propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number: In addition, the determining Carcinoma Associated (CA) gene copy number: In addition, the carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This parent is an equivalent to basic patent upsated using the capable patent is an equivalent to basic patent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Recombinant nucleic acid useful for diagnosis and treatment of carcinoma comprises a nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     347 AAGCTATTGCCATGGTCCAAGCAAGAGATGATGAAGGCCTAAATATGGAGCCAAAGAGGC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to novel DNA and protein sequences which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 144035 BP; 43371 A; 28888 C; 27578 G; 44198 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention describes a new compound 8-80 nucleobases in length targeted to a nucleic acid molecule encoding hepatocyte growth factor receptor, where the compound specifically hybridises with the nucleic acid molecule encoding hepatocyte growth factor receptor comprising a sequence of 4586 bp (SEQ ID NO: 4) and inhibits the expression of hepatocyte growth factor receptor in cells inhibiting the expression of hepatocyte growth factor receptor in cells or tissues; screening for a modulator of hepatocyte growth factor in cells receptor; a diagnostic method for identifying a disease state, a kit or assay device comprising the compound; and treating an animal having a disease or condition associated with hepatocyte growth factor receptor. The compound and methods are useful in diagnosing and treating having a hyperproliferative disorder. This sequence represents a human, hepatocyte provite accounts.

CC the 58798 Cotton plant cDNA sequences mentioned in the specification.

CC sequences mentioned in the specification and producing a plant having an improved property.

CC comprises transforming a plant with a recombinant construct comprising a promoter region functional in a plant cell operably joined to a promoter region functional in a plant cell operably joined to a promoterty, and growing the transformed plant. The polypetide associated with the property, and growing the transformed plant. The polypetide is cuseful for improving plant cold tolerance manipulating growth rate in plant tolerance, providing increased resistance to plant disease, coroughing plant cold tolerance manipulating growth rate in plant tolerance, improving plant tolerance to plant disease, coroughing increased resistance to herbicides, increasing plant heat tolerance, improving plant tolerance to herbicides, increasing colducing galactomannan (or lignin or plant growth regulators) improving plant tolerance concern; improving plant tolerance to herbicides, increasing the rate of homologous recombination in plants; improving pield by modification of photosynthesis, modifying seed oil or protein yield by modification of content, improving yield by modification of carbohydrate, introgen corpus, improving yield by modification of plant growth and development under at least one stress condition. The plant growth and development under at least one stress condition. The polymucleotide and polypeptide may also be used in recombinant DNA

constructs, in physical arrays of molecules, as plant breeding markers, or in computer-based storage and analysis systems. The present sequence is a Cotton plant cDNA of the invention. NOTE: The sequence data for thi patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence is commat directly from USPTO at sequence. The sequence were available, the remaining 52213 polymucleotides and all 58798 protein sequences were not present.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                               The invention relates to nucleic acids comprising a segment of chemically pretreated DNA of adrenergic alpha-1C-receptor gene. The invention also relates to oligomuclectides or peptide nucleic acid (PNA) oligomers useful for detecting cytosine methylations. The pretreated DNA is useful tor the diagnosis or therapy of behavioural disorders, neurological for the diagnosis or therapy of behavioural disorders, neurological syndrome, schizophrenia, psychiatric and neurological disorders, smoking, syndrome, schizophrenia, personality traits, compulsive gambling, human drug abuse, alcoholism, personality traits, compulsive gambling, human schizoaffective patients, and suicidal behaviours in schizophrenic and schizophrenia. The nucleic acid is useful for detecting the methylation schizophrenia. The nucleicides and/or single nucleotide polymorphisms (SUDS) when recent someoners in human consists of all CPG dinucleotides and/or single nucleotide polymorphisms (SUDS) when recent

The invention relates to a nucleic acid comprising a sequence at least 18 conserved by asset in length of a segment of the chemically pretreated DNA of genes associated with pharmacogenomics according to one of the sequences of the associated with pharmacogenomics according to one of the sequences of the genes ALDHG (NM 000693), CYPIJA (NM 000776, IM 000697), CYPJA3 (SM 000776, IM 000693), CYPIJA (NM 0003160), MRP (NM 0004996, IM 019900, IM 019901, NM 019900, NM 019900, NM 019901, NM 019902, NM 019862, NM 019808, NM 019909) and CC (NM 000776, IM 019901, NM 019902, NM 019862, NM 019808, NM 019909) and CC their complements. The chemical pretreatment is bisulphite sequences and their complements. The chemical pretreatment is bisulphite treatment to convert cytosines (but not methyl-cytosines) into uracils. CC treatment to convert cytosines (but not methyl-cytosines) into uracils. CC treatment to convert cytosines (but not methyl-cytosines) into uracils. Also included are an oligomer (II) in particular an oligomer or a passociated with complements, arranged in an array for identical to a chemically pretreated DNA of genes associated with the methylation state (Cp) and/or analysing diseases associated with the methylation state (Cp) and/or analysing diseases associated with the methylation state (Cp) and/or analysing diseases associated with the methylation state (Cp) and/or analysing diseases associated with the methylation state (Cp) and/or and their complements is useful for diagnosis and therapy of solid and cancer. The present sequence date for this patent did and their complement. Note: The sequence date for this patent did electronic format directly from WIPO at celectronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3258 Aritnggirnágraagriágáraraaaitárrárritarrádárrártíritáarráátárr 3317

The invention relates to a novel recombinant nucleic acid comprising a nucleotide sequence salected from any of the 600 sequences fully defined in the specification. A polymucleotide of the invention has cytostatic activity, and may have a use in gene therapy, or in a vaccine. The recombinant nucleic acids and polymptides are useful for treating carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and sarcomas. The present sequence represents a human gene of the invention.
                                                                                                                                                                                                                  recombinant nucleic acid, useful for treating carcinomas, lymphomas,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 52302 BP; 13145 A; 12501 C; 12728 G; 13888 T; 0 U; 40 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to recombinant carcinoma associated (CA) nucleic acid sequences from mouse and human (ADA01482-ADA03094), and to recombinant carcinoma associated proteins (CAP) encoded by them. The invention also encompasses expression vectors and host cells comprising a CA nucleic acid, a polypeptide (especially an antibody) that specifically binds to the protein, and a blochip comprising CA nucleic acid or fragments thereof. The sequences of the invention were identified using oncogenic retroviruses, which insert into the genome of the host organism at random. Many of these do not carry transduced host oncogenes or pathogenic trans-acting viral genes, meaning that cancer incidence is a direct consequence of the effects of proviral integration into host protonnocegenes. The CA nucleic acid sequences can be used to diagnose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          carcinoma (especially breast cancer, prostate cancer, lymphoma or leukaemia) or a propensity to carcinoma by determination of the sequence of a CA gene, or by determination of CA gene expression in particular tissues. CA nucleic acids, proteins and antibodies are also useful as present sequence represents a specifically claimed human CA nucleic acids present sequence are also useful as present sequence of the invention. Note: The complete sequence data for this patent did not form part of the printed specification, but was obtained
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         86
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      27 AGGAGAAGGAAGAGTGGGAGCAAATACCTGGAGGTAGAAATGGTGATGTGTACATCA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 52302 BP; 13145 A; 12501 C; 12728 G; 13888 T; 0 U; 40 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to new recombinant nucleic acids. The invention calso relates to a host cell comprising a recombinant nucleic acid or also relates to a host cell comprising a recombinant nucleic acid or expression vector, an expression vector comprising a recombinant nucleic acid, a recombinant protein, a method of screening for drug candidates, a carcinoma associated protein (CAP) encoded by a nucleotide sequence, a carcinoma associated protein (CAP) encoded by a nucleotide sequence, a carcinoma associated protein (CAP) encoded by a nucleotide sequence, a carcinoma drug, a method of evaluating the effect of a candidate carcinoma drug, a method of diagnosing carcinoma, a method of for inhibiting carcinoma, an enchod of capanosing carcinomas, a method of method of evaluating the effect of a candidate contralising the effect of a CAP, and method of evaluating the effect of a candidate propensity to carcinoma. A method of evaluating the effect of a candidate contransmant of carcinoma drug comprises administering the drug to a patient, removing a carcinoma drug comprises administering alterations in the
                                                                                                                                                                                ö
                                                                                                                                                                  86
associated (CA) genes from the 50 tables given in the specification. The CA proteins are secreted, transmembrane or intracellular proteins. The recombinant nucleic acids are useful for screening for drug candidates for diagnosing or treating carcinomas. Sequences given in ADC85215-ADC85514 represent CA genes of the invention.

```
expression or activation of a gene comprising the nucleotide sequence. A method of diagnosing carcinoma comprises determining the expression of method of diagnosing carcinoma comparing the expression of the gene first individual and comparing the expression of the gene from type of a first individual and comparing the expression of the gene from that the first individual, where a difference in the expression indicates unaffected individual, where a difference in the expression indicates that the first individual has carcinoma. A method of inhibiting the carcinomas comprises binding an inhibitor to the CAP. Treating carcinomas comprises administering to a patient a inhibitor of CAP.

Correspond to the CAP comprises contacting an agent specific Neutralising the effect of a CAP comprises contacting an agent specific CAP the nucleic acid. It comprises an antibody that specifically binds to the protein encoded by the nucleic acid. The nucleic acid is to nucleic acid. The nucleic acid. The nucleic acid. The nucleic acid in a composition for diagnosing or treating carcinoma e.g., proper in a composition for diagnosing or treating carcinoma e.g., corrected to the protein capt and not form that specification but was contained in electronic format directly from USPTO at contained in electronic format directly from USPTO at

ij,
involved in plant resistance or response to pathogenic infection. Mi comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (MI) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                  62 AGAAATGGTGATGATGTACATCAAGCAGGAGAAAACCAAATGAACCAGATGCGAATTC 121

This invention relates to novel, isolated full length human cDNA molecules and the encoded proteins thereof. Specifically, it refers to constitute obtained by an oligo-capping method, where none of these clones are identical to any known human mRNAs. The present invention describes an immunoassay to identify agonists and antagonists, as well as cartibodises, antisense molecules and siRNAs that can all be used to bind to and modulate expression of the CDNA molecules. As such, these to and modulate expression of the CDNA molecules. They are useful in gene therapy for treating osteoporosis, neurological disease, Alzheimer's disease, Parkinson's disease, dementia, short memory and various cancers, as well as for maintaining equilibrium of sense or mortor function, and for treating emotional reaction, fear response and panic. Accordingly, they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian, cytostatic and tranquilliser activities. This sequence is not always in the sequence listing of the specification but can be obtained on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1800 TATTAAGAAATGATAGGAACATTGACACTAATGTGGAGGAATTTGCCAAATATTTTATTT 1859

Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (B-mail : seqrefégenoscope.cns.fr - Web : www genoscope.cns.fr) effective is sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster ARC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and bow to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CNS0039G 1101 bp DNA linear GSS 03-JUN-1999

Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the Isogenic strain y2. On bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Barkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Gsoegawa and mannoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Direct Submission Submitted (23-JUL-1999) Genoscope - Centre National de Sequencage : Submitted (23-JUL-1999) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr )
Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - . This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the Esogenic strain used for the BDGP in the BDGP and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

uetermination of this BAC-end sequence was carried out as part of a collaboration with the Barkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BAGs. For further information please see http://www.fruitily.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw Bp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be Location/Qualifiers
